

ASSESS!

A course developed by KyleDavidBates

As an EMS provider you are limited in the care that you are allowed to render, however there are no limits as to what you are able to know. A solid patient assessment is the foundation of any good provider's treatment plan. It must be completed before any treatment is rendered and then performed again to determine if the treatment is beneficial to the patient.

Assess! is an interactive program that elicits discussion from the learners. It is designed for experienced and inexperienced providers at both the BLS and ALS levels. It begins at the very beginning with scene safety and expands to involve some advanced assessment techniques as well as radiological and laboratory findings.

Assess!

Course # 300005

A 4-hour program

\$150 PER CLASS
