

# PHARMACOLOGY

for the EMT and Intermediate

The administration of medications by the EMT and intermediate may be a life-saving procedure, however giving the wrong drug to the wrong patient in the wrong situation may be harmful if not fatal.

This case-based presentation will not only review the medications that EMTs and intermediates are allowed to administer and assist with, but will also review the medical emergencies and protocols that warrant their use.

This program will also take the complex world of pharmacology and simplify it allowing the EMT and intermediate to utilize its concepts.

Medications:

ASA

Albuterol

Oral Glucose

Nitroglycerin

Epinephrine
